

White Paper

Dr. Xin Health Industry Chain

Xin Time Token (XTT)

**- A Pioneer Committed to the Integration of
Traditional Chinese and Modern Western Health Industries**

**- Chinese National Quintessence of Acupuncture's
Unprecedented Utilization of Block Chain Technology**

PART 1.

Project Overview

Analysis of Acupuncture and Health Industry of Traditional Chinese Medicine

Acupuncture is a general term for both acupuncture and moxibustion.

Acupuncture is the therapy of piercing filiform needles at a certain angle into the patient's body, and applying acupuncture skills such as rubbing, twisting, lifting and pinning to stimulate specific parts of the body so as to treat diseases under the guidance of the theory of traditional Chinese medicine. The points of penetration are referred to as acupuncture points. According to the latest acupuncture textbook statistics, the human body has a total of 361 positive acupuncture points.

Moxibustion is the therapy using a medium of heat transmission called moxa, usually moxa sticks or moxa herbs, to burn and fumigate certain acupuncture points so that the resultant heat stimulation prevents and treats diseases. The most commonly used moxa is a herb called artemisia argyi, others include herbal cake separation, willow, wick and mulberry. But the most popular moxibustion applied in our daily life today is artemisia argyi moxibustion.

Acupuncture and moxibustion are the important components of Oriental medicine. Because of its unique advantages of wide adaptability, rapid and effective treatment, easy operation, economical medical expenses, and few side effects, Chinese acupuncture has spread to Japan, North Korea, India, Arabia and other countries ever since the Tang Dynasty and has developed various characteristics in different countries, making great contributions in safeguarding the health of all human beings.

At present, acupuncture can treat more than 500 diseases. Over 100 diseases can achieve significant effects by acupuncture treatment alone. In the recovery period of serious diseases, such as stroke, cancer, physical activity disorder, etc., acupuncture has become the main treatment, and has significant effects in recovery and pain releasing. Today, there are around

300,000 to 400,000 practitioners working in 183 countries and regions. More than 30 countries and regions have established corresponding laws and regulations, and 18 countries and regions have included acupuncture in the national health insurance. Acupuncture was enlisted in China's first batch of National Intangible Cultural Heritages in 2006.

The future output value of the acupuncture industry can reflect the development prospects of the entire Chinese traditional medicine industry. In the past seven years, the market size of Chinese medicine health industry has continued to rise, maintaining double-digit growth. The outcome reached 1.7 trillion Yuan in 2017 with a year-on-year increase of 21.1%. According to the white paper *Chinese Medicine in China* issued by the Information Office of the State Council of the People's Republic of China, the outcome of Chinese medicine health industry will break through 3 trillion Yuan by 2020, with a compound annual growth rate of 20%. It can be seen that the Chinese medicine industry has a strong potential for growth in the future.

According to the relevant data disclosed by the Prospective Industry Research Institute, the Chinese medicine health industry will have a market capacity of about 3 trillion Yuan in the next five years. With the wide spread of Oriental medicine theory and technology worldwide, the market space of traditional Chinese medicine industry will continue to expand.

Integration of Traditional Chinese Medicine and Modern Western Medical Technology System

The study of the integration of Chinese medicine and Western medicine is an integration of Eastern and Western philosophies. While traditional Chinese medicine views the human body as a whole and dialectically examines the nature of the disease, western medicine distinguishes the essence of the disease based on quantitative indicators. The difference between the two represents the difference between Eastern and Western cultures. The imagery, dialectic, holography and integration thinking of Eastern culture, and the subdivision, logic, empirical study and mechanical reductionism thinking of Western culture, are like the two indispensable hemispheres that constituting the globe.

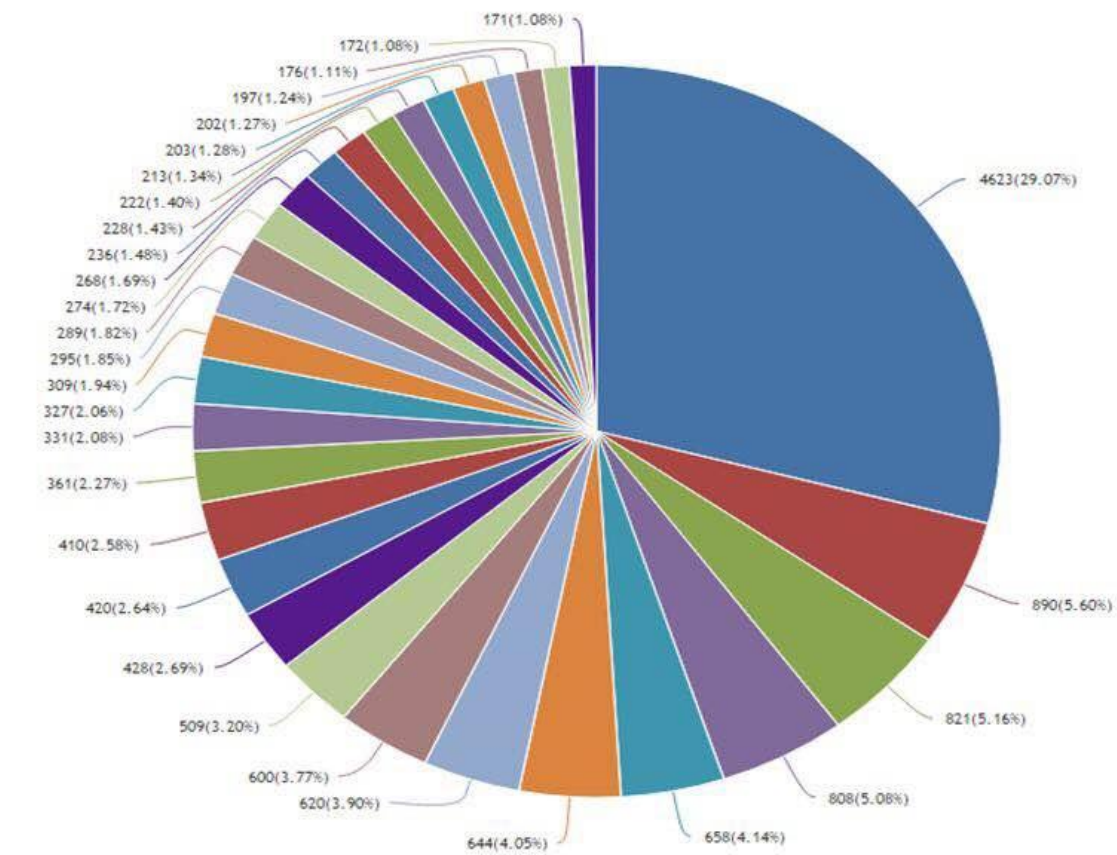

The new era of medicine requires the integration of modern medicine and traditional medicine. Chinese medicine is the most systematically accumulated, widely used and scientifically based among the national medicines in the world. The revitalization of Chinese medicine depends on the strategy of cross-border integration of Chinese medicine and Western medicine which explores the scientific connotation of traditional Chinese medicine and promotes its inheritance

and creativity by scientific and technological innovation, learns from Western medicine, and applies modern scientific and technological achievements. At present, new concepts and methods such as the clinic application of systemic complex science, big data, Internet of Things, and Internet of Values have emerged, breaking through the inherent thinking patterns and research models, and transforming the traditional Chinese medicine research methods. The rapid development of advanced technologies such as biology, electronics, big data, artificial intelligence, and mental health education has provided strong support for the breakthrough of the research on Chinese and Western medicine cross-border integration.

"Integrated medicine" conforms to the trend of medical development in the new era. In view of this, multi-disciplinary, cross-industry and Sino-foreign cooperation is more extensive, and the depth and breadth of the integration of modern science & technology and traditional Chinese medicine are constantly expanding, which provides a broader space for innovation in accelerating the modernization and internationalization of Chinese and Western medicine integration projects. The "integrated medicine" represented by the cross-border Chinese and Western medicine integration project will seek the key to unlock the door of human health in the future, and medical development will inevitably enter a new era of cross-border Chinese and Western medicine integration.

With the economy growth, the arrival of China's aging society, and the development and application of life science achievements, human life will open a new page. Through intervention of advanced science and medicine, human beings can reverse and delay aging effectively. The integration of traditional Chinese medicine and Western modern medicine has opened a new chapter in the health industry, providing strong technical support for anti-aging and reversing aging.

With the advancement of the world's major health and anti-aging industries, the sophisticated research on anti-aging science has also made obvious progress. According to the data analysis of CNKI (China National Knowledge Infrastructure), there are more than 10,000 scientific research papers on anti-aging, including 550 foreign literatures involving more than 10 languages. Among them, 4,463 articles use "anti-aging" as the keywords.

- Anti-aging
- Superoxide dismutase
- Mus musculus
- SOD
- Aging model
- Galactose
- Delaying senescence
- Aging mus musculus
- Free radical
- Experimental study
- Antioxidant

- MDA

- Model group
- Free radical
- Aging process
- Aging rats
- Model mice
- Brain tissue
- Pharmacological action
- Dosage
- Cell senescence
- Control group
- Immunity
- Vitamin
- Anatomical part
- Skin senescence
- Extractive

1.1 Industry Difficulties and Causes Analysis

As an important branch of traditional Chinese medicine, China's acupuncture industry has made great strides in recent years, which symbolizes the rapid development of Chinese medicine. Meanwhile, the acupuncture industry confronts many difficulties. Firstly, the basic theory of acupuncture and the explanation of curative effect mechanism need further study; Secondly, the standardization of acupuncture needs to be further improved; Thirdly, the service model of acupuncture needs further innovation; Fourthly, the inheritance of acupuncture has mainly two ways of apprentice-to- skilled-master and self-teaching under which the successful clinical experiences of many acupuncture therapists may only remain in their hands instead of becoming a universal technology in the medical field. As a matter of fact, many masters keep their skills as a secret almost to the death, which limits the spread of the therapy. Precious clinical experiences need to be passed down or otherwise they might disappear along with the senior aged masters; Fifthly, health centers which focus on acupuncture and physiotherapy are established in many

countries and regions, however, due to the lack of acupuncture efficacy evaluation criterion, many small sized health management centers employ people without clinical qualifications to carry out the therapy, which leads to a disorder in the industry.

With the increasing acceptance and recognition of the acupuncture industry in the world, acupuncturists who have over ten years or even decades of clinical practice and sophisticated research shall contribute their advice and suggestion in the top-layer design by offering systematic training courses, help more aspiring practitioners enter the industry, and benefit the general public.

Furthermore, through the introduction, improvement and localization of Western health system, traditional Chinese medicine is integrated with the Western modern system. Personalized and customized health management centers which apply acupuncture therapy, anti-aging treatment and anti-tumor treatment can be established. While modern medical devices are applied in diagnose, multiple medical treatment of acupuncture, cell-level targeted therapy, molecular-level physical therapy, etc. are available.

1.2 Project Overview and Solutions

Based on the block chain technology integration, Dr. Xin R&D center is committed to the new concept of the integration between traditional Chinese medicine and Western therapy, and provides precisely targeted training both online and offline to improve technique level of the offline health management centers and creates the upper chain of the therapist-patient data, and provides standardized and customized expert systematic solutions by enhancing the learning function of the neural network. Dr. Xin Project brings about an opportunity for the development of the integration of traditional Chinese acupuncture, Western physical therapy and genetic engineering through customized training courses, and facilitates acupuncture techniques to target more accurately toward the physical therapists and the vast majority of patients by utilization of block chain technology and new economy mode of token.

1.2.1 Introduction of Dr. Xin Brand

Founded in 2018, Dr. Xin is a global comprehensive health management brand featuring the concept of “family health management”. We are dedicated to the businesses of online and offline training on multi-disciplinary acupuncture theory and skills, management of health centers, providing personalized acupuncture and physical therapy, and offering online health mall

services. Mr. Xin Ziliang, the founder of Dr. Xin brand, born in a family of traditional Chinese medicine masters, is a prestigious traditional Chinese medicine doctor in Canada, a member of Toronto Children's Hospital Charity Association, the founder of Five Elements Strength Concentration Massage and Acupuncture Therapy, and a leading figure in the international acupuncture science. Over the years, adhering to the tenet of "Contribute to the motherland by practicing medical treatment and spreading acupuncture technique", Dr. Xin has been a pioneer in innovation and is committed to popularizing the knowledge of acupuncture and physical therapy by teaching and training young therapists to become advanced physical therapists who possess mature skills. In the new era, in order to achieve anticipated goals, it is necessary to effectively integrate traditional Chinese medicine health industry with block chain technology, big data, artificial intelligence and other advanced technologies to achieve standardized, distance-service-available and convenient acupuncture treatment. Meanwhile, Dr. Xin Health Industry also devotes to the applying of Western modern medical system focusing on the five safety elements of medical care, nursing, devices, environment and team. International advanced medical tools and concepts such as immune cell therapy, NK targeted therapy, HGH health physical therapy are applied through cooperation with renowned medical care centers and R&D centers around the world.

The principal concept of Dr. Xin brand is to utilize the integration of traditional Chinese medicine and modern Western medicine as an efficient means to spread worldwide the health ideas and exquisite acupuncture techniques created by Xin Ziliang, who is committed to acupuncture for a lifetime, and to promote the quintessence of Chinese medicine in the international health market with the hope that acupuncture can benefit every individual who needs it. Dr. Xin brand founded by Xin Ziliang is based on three concepts : the first is Innovation--Five Elements Strength Concentration Massage and Acupuncture Therapy invented by Xin Ziliang; the second is Commitment-- Dr. Xin is committed to medical and charity, healing the wounded and rescuing the dying; and the third is Trust-- Dr. Xin has built an unbreakable mutual trust mechanism between he and his students, and between the therapists and the patients, together they endeavor to make the health industry advance steadily.

In 2019, in the direction of traditional entity management, Dr. Xin will follow the previous model of combining Internet lectures and offline fine teaching. Dr. Xin project plans to conduct 120 specialized training programs for 10,000 health management professionals. Meanwhile, to establish 1,000 direct owned, affiliated or cooperative health management centers round the

world (“1000 Shops” Initiative). Indirect trainees are expected to reach 5 million. The value of output is anticipated to be 200 million Yuan.

1.2.2 Development Trend of Block Chain Technology

Block chain is a new application paradigm of integrated distributed data storage, Point-to-Point Tunneling, consensus mechanism, encryption algorithm and other underlying technologies. It is considered to be another subversive innovation in the Internet era, and is known as the fourth industrial revolution succeeding steam revolution, electricity revolution and computer revolution. Because of its tremendous breakthrough in data storage and value transmission, it is likely to fundamentally change the existing business operation mode and social structure and induce a new round of technological innovation and industrial transformation on a global scale. Block chain is gradually recognized by enterprises in many countries though it was unknown to people not long before, of which there is a profound inner logic. Just as the rapid development of the information technology revolution that originated in the 1950s greatly reduced the cost of human information interaction and brought about the efficient interconnection of information in the true sense of the modern society, block chain as a decentralized data system based on a distributed ledger will bring brand new Internet of values to the human society.

Block chain is a chained data structure in which data blocks are sequentially connected in a chronological order, and a cryptographically guaranteed distributed ledger that cannot be tampered with or falsified. The essence of block chain is a distributed accounting system, and the encrypted digital assets (such as Bitcoin) are the assets or currencies that exist in digital form on this system, that is, the encrypted digital assets are just a representation of accounting, and block chain is a set of distributed, encrypted, trusted accounting systems and clearing systems at its underlying level.

Beginning in 2017, with the skyrocketing of various digital currencies based on block chain, block chain technology behind Bitcoin has further attracted the attention of business and financial circles around the world. This kind of integration technology that integrates consensus mechanism, encryption algorithm, Point-to-Point Tunneling, and distributed data storage, because it is non-forgery, non-tampering, non-reversible and non-lost, is suitable for recording financial, medical and other activities which need necessary records of stored data. Block chain has enormous potential to lead global financial and business changes, and has brought about the dawn of a dramatic change to the digital economy era; 2018 is the first year of public chain

explosion. With the cooling of the ICO in 2017, the application boom in the first quarter of 2018 turned into public chain platform boom in the second and third quarters; In the fourth quarter, the tide of the public chain platform faded, while the token for tangible assets rose; The market values of public chain projects and application projects return to the same level.

In recent years, as a revolutionary technology, block chain has also become a complete industry while empowering various industries. According to the current situation, the entire block chain industry chain is divided into five major sectors:

- Hardware and infrastructure: Provide and integrate underlying computing power and hardware support for various block chains;
- Platform and base layer: Provide underlying architecture, development platform and ecology for various block chain applications;
- Common technology layer: Make block chain applications easier to deploy and apply, serve developers and users;
- Vertical application layer: Apply block chain to various industries and scenarios to serve end users;
- Peripheral service layer: Help the flow of funds and information, and provide professional services to industry chain participants.

The fourth section of the vertical application layer: “Block chain+” develops gradually.

Enabling and enhancing business models are the key to a breaking through. Block chain application in 2018 is different from assets issuance based on the block chain in 2017. The market no longer pays for the price speculation of the token. Nor is it satisfied with the application of the block chain in value exchange, but it focuses on the business model. As a result, the application of the “block chain+” model begins to develop gradually. In a single block chain project, it is necessary to build a community based on block chain from scratch, and the commercialization may take a long process of development, user acquisition, community operations, and merchant acquisition. The “+” of the “block chain+” is reflected in the fact that when the profit model or application scenario of the traditional industry such as Dr. Xin platform already exists , and the offline real business has been developed smoothly, then block chain technology is applied in order to generate more value , including: building trust (using block chain distributed ledger features), data control and valuation (using block chain value transmission network characteristics), behavioral incentives (using block chain token incentive characteristics). These are the three core application levels of “block chain+” .

1.2.3 Overview of Dr. Xin Project

Dr. Xin Project is positioned as a value-added investment and quality project in the field of acupuncture treatment and training, and a perfect example of the integrated medicine industry in which the eco-system of marketing, medical services and education is integrated with block chain technology.

The goal of Dr. Xin Project is to foster a new type of distributed shared health industry ecology which focuses on the individual needs of acupuncturists and patients and other users and vertically segments the acupuncture industry. By applying Western cutting-edge medical technology, Dr. Xin Project links users, developers, and ecological partners, and creates and cultivates a new type of health industry ecological community, in which any member can use the project as the basis for development, promotion and usage, thus integration and sharing of high-quality medical resources across platforms and across borders are realized based on block chain technology and smart contracts.

Through consensus and incentive mechanism, technique training, learning and sharing, flux acquisition, marketing, and other activities are more open and transparent, and the users regain the control of and obtain the benefit of project development. The inheritance, promotion and application of acupuncture techniques can benefit more health management practitioners and patients and realize the ecological integration of the interests of practitioners, patients, developers and users, who can obtain dual identities of patients/practitioners, project shareholders and profit-seekers.

The Project proponent uses Xin Time Token (XTT) as the circulation settlement and equity certificate of Dr. Xin health eco-system to allow all participants obtain sufficient value circulation and value reflection in the same eco-system. XTT carries not only value attributes but also corresponding financial attributes. The XTT value will correspondingly appreciate along with the development and expansion of health eco-community which is the background for XTT circulation. Hence wealth is increased and transferred through the media of XTT. The benefit sharing mechanism and XTT's own deflation mechanism will also increase the value of XTT and benefit the holders.

After the completion of the Project's ecological closed-loop structure, the Project proponent will use the offline business as the initial support to match the online flux which is used to prosper

the application scenario, build a multi –link eco-system with trust mechanism, boost traditional acupuncture industry via the application of block chain technology, and create a globally influential open source code health community.

At the same time, in line with the principle of effective protection and inheritance of traditional Chinese medical techniques, the project will research and develop XTT public chain and the main network after the token mode of Dr. Xin health industry moves onto a steady track. Effective information such as the identities and skills of the heirs of Chinese traditional medicine will be registered and linked on the chain to form a unique digital identity in order to better apply and protect the quintessence of traditional Chinese medicine.

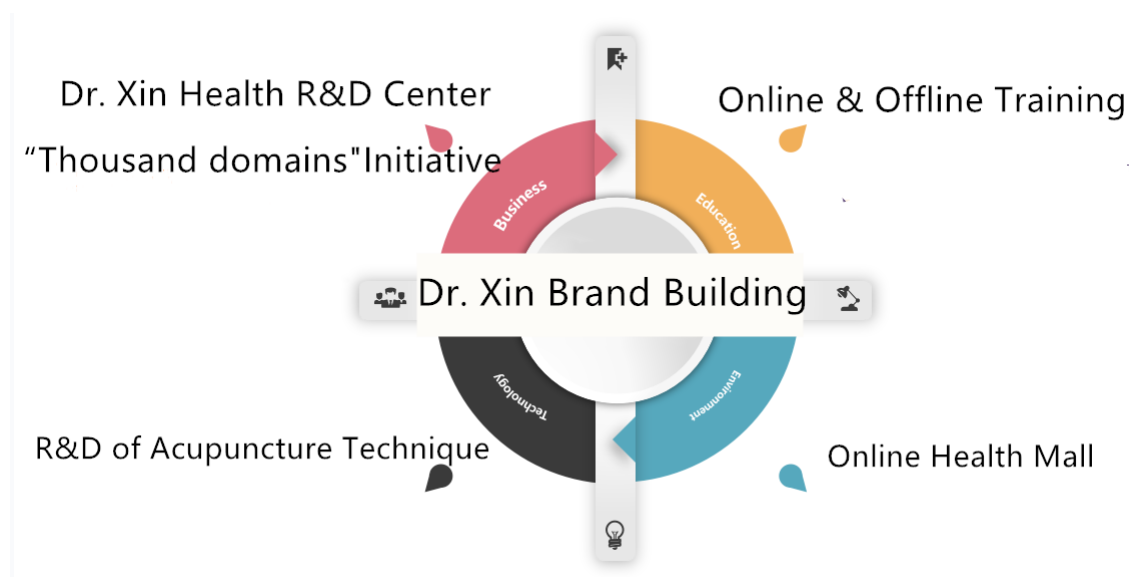

After Dr. Xin Project is officially launched, it will operate fully internationalized. The primary founder, Dr. Xin Ziliang, is a Canadian Chinese. His company is registered and acquires the Foundation license in Singapore. The trading platforms which Dr. Xin Project lands are globally recognized licensed ones. Dr. Xin Project will abide by and be protected by the laws of relevant countries.

PART 2.

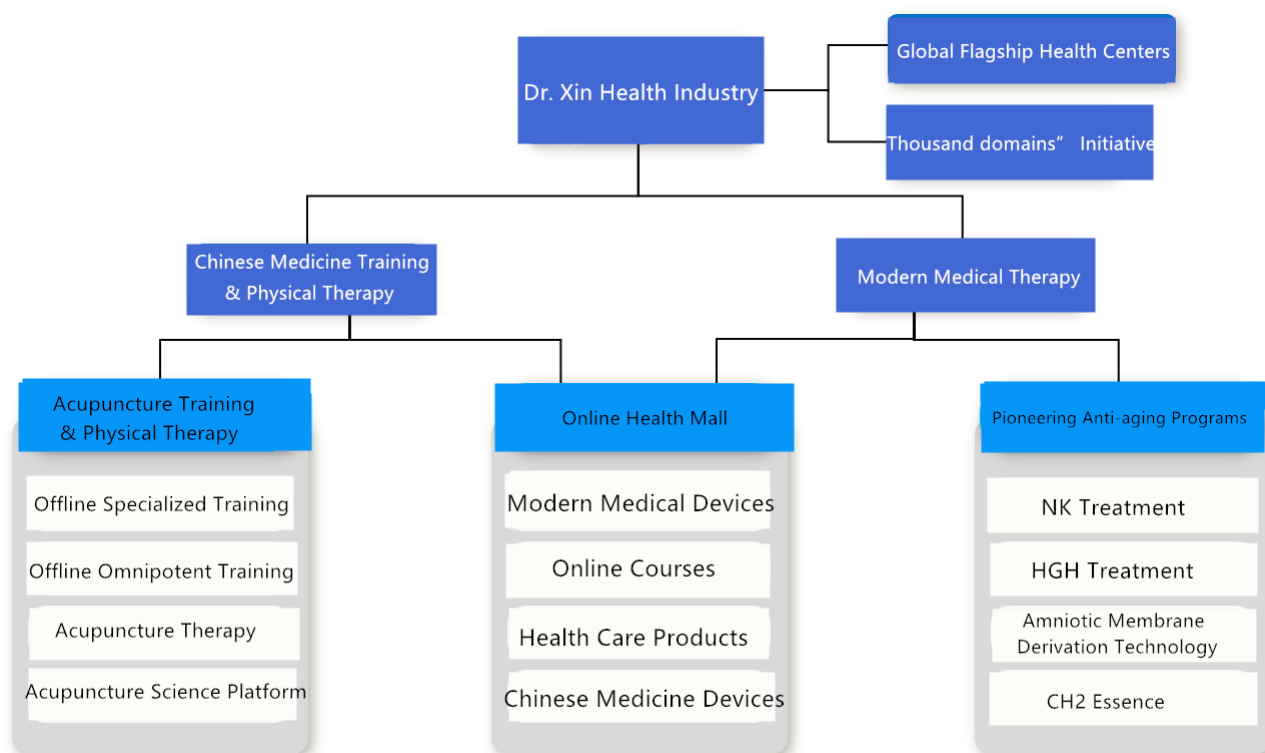

Eco-Industry Chain

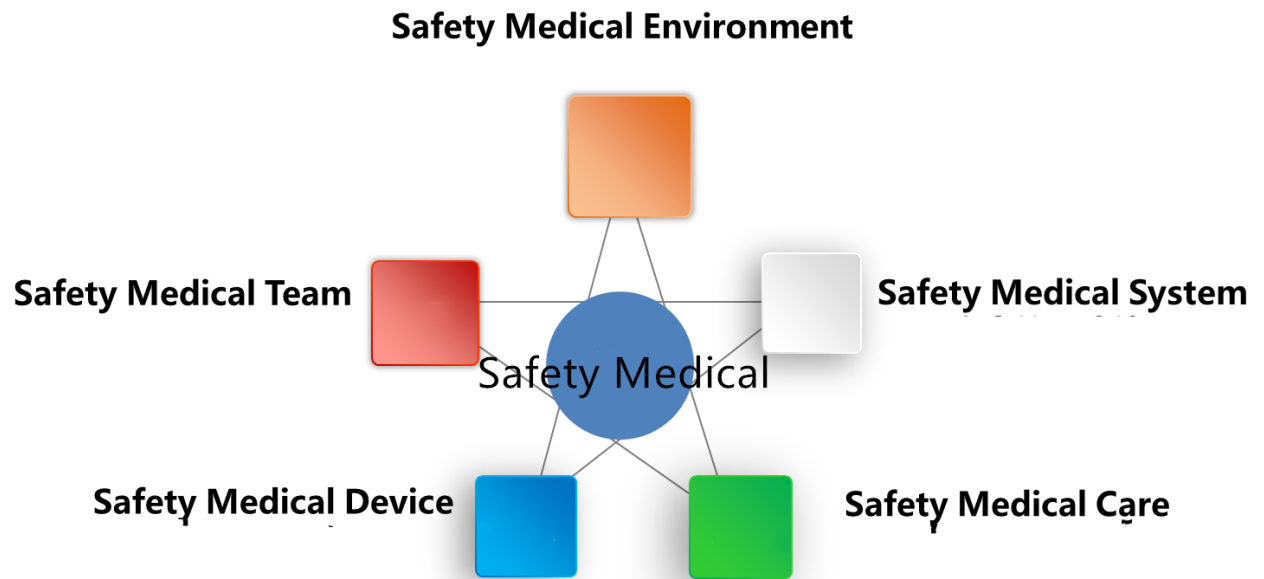

Dr. Xin integrated ecological industry chain applies the underlying technologies and algorithms of block chain, modern medical science and technology information flow and data flow, artificial deep neural network, etc. to integrate the traditional Chinese acupuncture with modern western medical science and technology. Concentrating on creating the key value of Dr. Xin brand, Dr. Xin Project lays out the online and offline health ecological industry chain, in which the business fields include brand building and improvement, establishment of flagship health management and research centers, establishment of 1000+ health management centers, online and offline omnipotent and specialized business training courses, and online health mall. Dr. Xin Project adopts the apprentice- to- skilled- master pattern of the inheritance of traditional Chinese medicine techniques and strives to create a protection mechanism for traditional Chinese

medicine practitioners by recognizing their identities on the chain, and generate an organic eco-loop of the traditional health industry.

2.1 Dr. Xin Health Management Industry Ecology

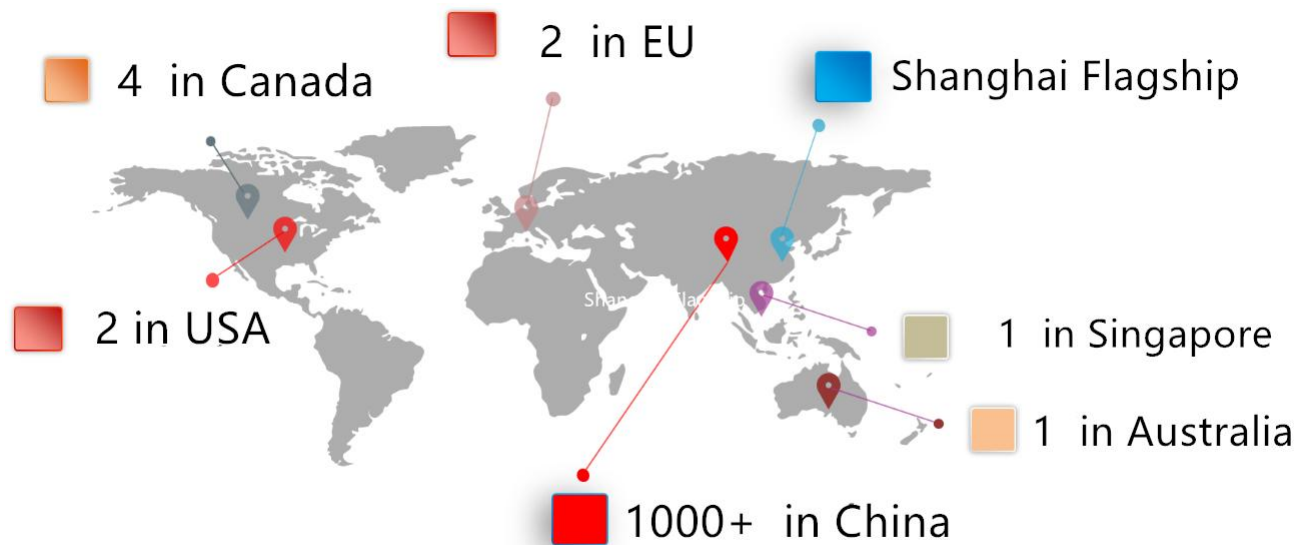

2.2 “Thousand domains” Initiative

Dr. Xin Project plans to establish over 1,000 health centers worldwide. Besides Shanghai International Health Center in China which is completed, Dr. Xin project plans to build 10 overseas international health centers (6 in North America, 2 in EU, 1 in Singapore and 1 in Australia), 34 provincial-level health centers (in 23 provinces, 4 municipalities, 2 special administrative regions, 5 autonomous regions) and over 1000 municipality- level health centers in the mainland of China, which is referred to as “1000 Shops” Initiative.

Standard for “Thousand domains” Initiative Health Centers

- Area of each health center: over 300 m².
- Standardized design and decoration scheme provided by the Headquarter, and unified identification.
- Functional areas: reception & information area; training and education & products display area; expert treatment area; and treatment experiencing area.

- Personnel: 1 shop manager, 1 or 2 experts, 5 guiding service managers, and 3 operators.
- Standardized diagnosis and treatment programs and supporting devices and products provided by the Headquarter.
- Relevant marketing and operation plans, personnel training, product knowledge training, and on-job training provided by the Headquarter.
- Academic theories and irregular expert support from the Headquarter.

2.3 Dr. XinAcupuncture Theory and Skill Training

2.3.1 Major Courses of Acupuncture Theory and Skill

48 First Aid Techniques

In daily life, there are many unexpected events that cause harm to the body and the health. In the opinion of Dr. Xin, in countless cases when accidents or illnesses occur, correct first aid measures are not taken for the injured patients, thus it results in various sequelae which seriously affect the quality of life, or even cause the lose of life. Therefore, everyone should popularize

first aid common knowledge.

Chronic Diseases Control

Chronic diseases refer to the long-standing diseases. Common chronic diseases include hypertension, liver disease, diabetes, and malignant tumors. Chronic diseases have become the number one killer of human health. It not only brings the patients long-term suffering, but also brings a heavy financial burden to the families and the society. Chronic diseases are generally complicated in etiology and diverse in conditions, requiring both treatment and nursing.

Acupuncture plays an important role in the control of chronic diseases.

Dr.Xin acupuncture therapy courses on control of chronic diseases include the following items:

Circulatory System: various types of chronic heart disease

Ophthalmology: lacrimal duct obstruction

Digestive System: chronic stomach disease, liver disease, hemorrhoids, constipation

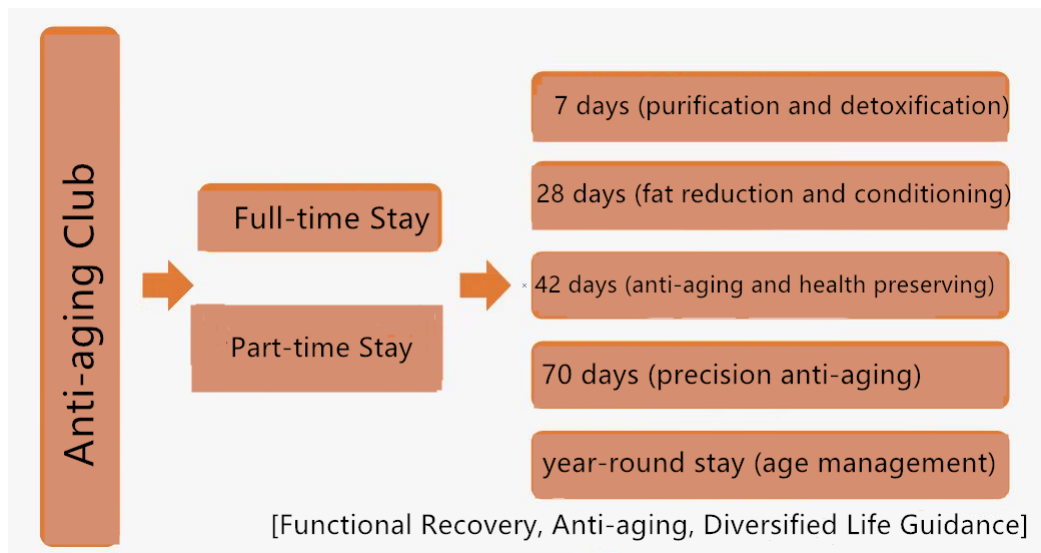

Nerves, Muscles and Bones: lumbar disc herniation, hard mass protruding from the junction of the lower back's 7th and 1st thoracic vertebrae, cervical spondylosis, gout, Meniere's syndrome, migraine, frozen shoulder, sports injury, ankle arthritis, golf shoulder, tennis elbow, micro-accident repair, Sciatica, ankylosing spondylitis, rheumatoid arthritis, rheumatoid arthritis.

Skin and endocrine system: lupus erythematosus, lymphoma, eczema, dryness, diabetes, HPV vaginal, herpes zoster.

Gynecology, andrology and urinary system: breast hyperplasia, prostatitis, benign prostatic hyperplasia, renal dialysis rehabilitation, urinary incontinence, sexual dysfunction. .

Anti-aging Management

Acupuncture regulates the functions of the two systems of hypothalamic-pituitary-adrenal cortex and sympathetic-adrenal medulla by stimulating meridians and acupoints, accelerates basal metabolic rate, adjusts, maintains and repairs health balance, and achieves favorable anti-aging effects.

2.3.2 Training Courses Development Plan

In 2019, Dr. Xin special training program on acupuncture theory and skill plans to set up 120 training courses offline for 10,000 health management trainees, and record and broadcast various online courses for 1,000 hours covering 200,000 trainees.

2.4 Dr. Xin Anti-Aging Medical System Project

Hormone Replacement Therapy

Human Growth Hormone (HGH) is a DNA recombinant human growth hormone with the same effect as human growth hormone which can stimulate the growth of bones, internal organs and the whole body, promote protein synthesis and affect fat and mineral metabolism, thus it plays a key role in human growth. Dr. Xin has carried out the research and developed a relevant oral product branded as Kangfubao, which can effectively improve the functions of the human body. Kangfubao is the only oral active peptide in the world at present. It promotes the synthesis and secretion of major hormones in the body, supplements the macromolecular active peptides which are decreasing in size due to aging. Taking it orally together with small doses of downstream hormones, such as male testosterone (testosterone undecanoate), female estrogen (estradiol valerate), progesterone, and DHEA, thyroid, etc. can respectively improve reproductive function, cardiopulmonary function, motor function, liver and kidney function, brain function and immune function.

Immunotherapy

Extract natural killer cells (NK) from blood, and measure their immune activity and the ability to kill cancer cells by means of precision instruments, special reagents, and fluorescent staining. By immune cells activity assay, CTC assay (loop tumor cell assay) and immune function assessment, and tumor risk assessment, immunotherapy assess human immune function as a basis for immune intervention. Our health centers use the top quality precision medical equipment to enhance the NK cell system and improve immunity and resistibility of human body, and effectively prevent and inhibit the occurrence and development of malignant tumors, and eliminate tumor lesions.

Microcirculation Therapy

The concept of Dr. Xin home care applies the German technology + Swiss Seiko's first-class medical device Bemer medical blanket to impact the cell layer and dredge the microcirculation. Beamer treatment promotes the absorption of ATP by cells, allows the cells to take in more oxygen molecules, increases blood flow by 27%. It also enhances venous return and oxygen utilization in the blood, effectively dredges micro vascular loops. This treatment works effectively on migraine, stroke, arthritis, dementia, renal failure and other diseases, and effectively enhances the function of glutathione in the liver, and effectively repairs the diseased liver.

Supra Molecular Plant Extract Therapy

CH2 Essence, its patented ingredient--natural supra molecular system is based on supra molecular chemistry which won the Nobel Prize. CH2 combines a variety of natural ingredients which are combined in precise order and proportion. The effect of each component is enhanced when combined with one another so to form a powerful human defense system. CH2 has multiple functions of killing bacteria, repairing, preventing and conditioning while not destroying mucosal tissue cells. CH2 is the first biomedical-grade disease prevention product on the market, and it surpasses other competing products in the market with 144 times the ultimate antibacterial ability (killing rate as high as 99.9%). Since its ingredients are natural, CH2 is safe to use. It is used in the care and defense of woman body, and is the leading product on prevention of common viruses and pathogenic bacteria such as human papillomavirus (HPV),

herpes zoster virus (HSV-1 and HSV-2). The components of CH2 mainly include plant extract high-efficiency antibacterial factor, American aloe and beet root extract essence, gene revitalization, Japanese advanced hyaluronic acid, German probiotics, and food grade lactic acid. When compounded, these natural essences help to prevent infection of virus and bacteria, and are effective for the repair and moisturization of the female body.

Inhale Health Therapy

This therapy applies thermo chemical technology to convert active trace elements into smog for users to inhale while maintaining the biological activity of effective substances, which are vitamin B12 (effectively maintain vitamin levels), caffeine (immediate energy), and melatonin (keep melanin levels and help sleep quality).

2.5 Dr. Xin Online Health Mall

Dr. Xin Online Health Mall is XTT's DAPP, which provides redemption for the services and products including online and offline acupuncture theory and skills training courses, health center conditioning experience appointments, and Dr. Xin brand series of acupuncture conditioning devices, health foods, health products, health care devices, etc. Committed to the concept of “Home-Stay Health Management”, Dr. Xin Health Mall plans to develop more service categories such as home therapy, specialized health consultation, and online specialized service programs conducted by the contracted Chinese medicine therapists.

PART 3.

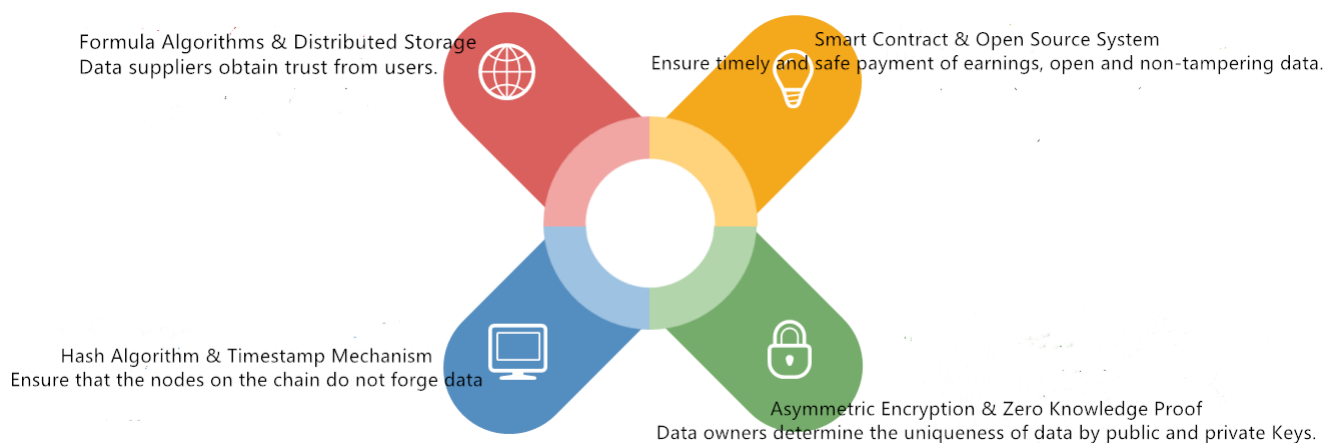

Advantages of Tech-Integration

Dr. Xin project combines the main advantages of block chain and neural network by integrating traditional Chinese medicine, modern western medicine, block chain and artificial intelligence learning technology in

depth.

3.1 Block Chain

Block chain is a new application mode of distributed data storage, point-to-point transmission, consensus mechanism, encryption algorithm and other technologies. The consensus mechanism is realized by the mathematical algorithm of establishing trust and acquiring rights among different points in the block chain system. Because fundamentally the block chain will convert Internet of information into Internet of value, and information calculable into value trustworthy. This allows the block chain to support the highly trusted business by subverting traditional information system technology models. Specifically, the various aspects of the application of the block chain technology in this project include: 1. The application of block chain system: All kinds of effective information and data generated by various encryption technologies are not repudiation and cannot be tampered; 2. The operation of block chain system: Through the smart contract, the system automatically carries out operation and management according to the agreed rules, without the control of any centralized organization, and achieves decentralization or multi-centered; 3. The development of block chain system: All rules and source codes are developed according to the rules and are transparent and open, and the developers cannot hide the back door.

3.2 XTT

XTT (Xin Time Token) is currently based on the Ethereum ERC20 platform and is a digital currency carrier based on decentralization and block chain payment technology. The encrypted

digital XTT system enables point-to-point direct transactions, thus avoids the problems of traditional centralized payments such as high fees and cumbersome processes. All transactions must be authenticated by the network nodes and permanently recorded in a publicly distributed ledger based on block chain technology. XTT is an important tool for the transfer of endogenous value of the project.

In the future, XTT will develop its own public chain and launch the main network to form a decentralized value network ecosystem. By then, the project will map XTT of all ERC20 platforms according to the contract rules. Its health industry ecosystem is divided into three layers: The bottom layer is the XTT main network, the middle layer is Dr. Xin Project, and the upper layer is the XTT ecological incubator. The major ecological logic is that the main network is the infrastructure, and Dr. Xin Health Mall is the first block chain health industry DAPP deployed on the XTT main network, as well as the traffic entry of the entire XTT value network ecosystem.

3.3 IPFS (Inter-Planetary File System)

IPFS (Inter-Planetary File System) is integrated when the user's personal data is securely encrypted by differential privacy technology. IPFS is a global, point-to-point distributed version of the file system with the goal of complementing (and even replacing) the hypertext transfer protocol (HTTP) that currently dominates the Internet, and connecting all the computing devices with the same file system together. The principle is to replace the address based on the function variable name with the content-based address, that is, what the user searches for is not an address, but the content which is stored in a certain place. Instead of verifying the sender's identity, it only needs to verify the hash of the content. This will make the page faster, safer, more robust, and more durable. Dr. Xin Project further develops the IPFS system, and builds an engine suitable for medical health data storage. Via the data storage chain, it creates a dedicated holographic personalized medical database for each patient, and integrates multiple sample data to build acupuncture information model.

3.4 Digital Identity Authentication

XTT uses the block chain digital signature technology to form a confirmation system for the copyright of traditional medical techniques.

XTT uses the relevant contract system to reduce the copyright authorization and sales costs of traditional medical technology and improve distribution efficiency.

XTT utilizes block chain technology which is characterized by non-falsified and openness to allow medical techniques owners and authorized users to distribute income reasonably and flexibly.

Finally, by creating effective digital identities for the practitioners and inheritors of traditional medical techniques, a sustainable health industry model in which the inheritors, inventors and consumers interact positively and create value together is realized.

PART 4.

Dr. Xin

Self-GovernanceHealthEco-community

Dr. Xin Self-governance Health Eco-community will be established by the proponent of Dr. Xin Health Industry Chain Project, and will operate independently in the form of a global public council, and form an eco-community participated by Chinese medicine industry leading professionals. In order to more effectively implement the decentralized and democratic management innovative model within the eco-community, ensure the members' rights of governance, and improve management efficiency, based on cryptology and non-tampering smart contracts, community self-governance is realized through the process of dynamic game, and a completely open cross-chain underlying system is created. The Project aims to develop a new type of traditional medical industry which is based on block chain and create a democratic, prosperous, healthy and powerful token economy together with community members. The innovative mechanism and models mainly include the following:

4.1 Trusted Execution Environment (TEE)

In the future, when the community ecological structure is mature, Dr. Xin Health Industry Chain Project will build a kernel based on the DAG network of the asynchronous Byzantine fault-tolerant consensus mechanism to execute transaction output, value transmission, transaction information verification and persistent reporting. To further ensure future information security, kernel nodes need to run on TEE for distributed domain communication. Trusted Execution Environment (TEE) is a secure area on the host processor of a mobile device (including smart phones, tablets, set-top boxes, smart TVs, etc.) that ensures the security, confidentiality and integrity of code and data loaded into the environment. TEE provides an isolated execution environment with security features including: isolation execution, integrity of trusted applications, confidentiality of trusted data, secure storage, and more.

4.2 Light Witness

Light nodes for simplified payment verification of the project kernel are set up outside the project community super nodes. If a light node itself also holds the XTT, it has the opportunity to be a light witness. Light witnesses are arranged to vote automatically when they need to vote on the super nodes statement that is suspected of inaction under the call of the Arbitration Council. The light witnesses' votes are based on their stakes. All light witness votes are weighted to the Arbitration Council for formal voting. If the super nodes statement is judged invalid, the penalty for the super nodes is finally established, and the light witnesses are awarded the community tokens so that they maintain the motivation to carry out continuous voting.

4.3 Ruler System Demolishment

Dr. Xin project recruits community members with shared growth value and complementary resources globally to build the community and public chain infrastructure. The proponent of Dr. Xin Health Industry Chain Project may entrust a non-profit foundation to be responsible for the initial publicity and promotion of community ecology strategies, plans, models, concepts, values and visions, and to absorb eco-partners around the world. After the community's ecological infrastructure and operational mechanism are established, the proponent will transfer the absolute jurisdiction within the community to all members, and will achieve the demise of the

centralized ruling system.

4.4 DPOS Self-governance

Dr. Xin Health Industry Chain Project will launch a public chain R&D plan. In order to better achieve decentralization and a safe, healthy and long-lasting benign management model, the project will apply Delegated Proof of Stake (DPOS) mechanism to allow the community members to vote and determine the major events of the project.

4.5 Arbitration Board

Different from the loose traditional public chain community management, Dr. Xin Health Industry Chain Project relies on the community to implement the public council governance model. Public, impartial and independent third-party members are determined through official invitation, community recommendation and vote to constitute the arbitration council, which will manage the super nodes of the community and be responsible for making specific governance programs and equity incentives scheme.

4.6 Broken Ridges

Members of Dr. Xin Health Industry Chain Community have the rights to elect, supervise, picket and impeach the arbitration council members and determine their term of office. In some extreme cases, such as when the arbitration order made by the arbitration council lacks fairness, the community super node does not act and is not bound by the board of directors, the withdrawal rate of council members during the current management period exceeds 25%, and most members of the council are found to have direct interest relationship with the foundation established by the project party, the community KOL can initiate broken ridges to call on members of the community to vote to dismiss the current arbitration council. Removal from office takes effect when the number of votes cast by community members exceeds 51% of the total number of registered members.

PART 5.

Overview of Issuance and Circulation of Tokens

5.1 Overview of Issuance of Tokens

Xin Time Token (XTT) issued by the project is currently based on the Ethereum ERC20 platform and the total quantity is 200 million units and will never be over-issued. XTT is a token of functional equity of the health industry project. XTT, as the basis of membership rights and participation in the circulation of various links in the ecological environment, represents the user's right of use, deduction, resource replacement and the right to benefit from the health industry eco-system. During the marketing period, the users may obtain complimentary XTT tokens when they purchase the products and services online or offline, hence effective value interaction within the health industry eco-system will be achieved.

5.2 Pre-sale Plan

The proponent of Dr. Xin Health Industry Chain Project initially allocates 30% of the total tokens for the early supporters and participants. In the first round, the proponent allocates 20% of the total tokens by Global Partnership Program, and in the second round, the proponent allocates 10% of the total tokens by Private Placement Program. The time schedule for Global Partnership Program subscription is 2019.02.01 to 2019.02.28, and for Private Placement Program subscription is 2019.03.01 to 2019.03.31.

In the first round of subscription by Global Partnership Program, the total quantity of XTT tokens subscription is 40 million, the basic subscription unit is 200,000 XTT tokens, with a limit of 150 places, and the subscription ratio is USDT: XTT = 1:13.45. In the second round of subscription by Private Placement Program, the total quantity of XTT subscription is 20 million tokens, the base unit is 20,000 XTT tokens, with a limit of 200 places, and the subscription ratio is USDT: XTT = 1:6.725. When the pre-sale period is over, subsequent investors will also be able to purchase XTT legally in crypto currency transactions. The USDT from the initially two

rounds of subscription will be collected at the official collection address and publicly announced through the official channels.

XTT will gradually launch its global high-quality digital currency trading platform in early April, 2019. The project promises that XTT tokens will not fall below the private equity average price (0.111525 USDT) after landing on the trading platform. If the token price is lower than the average price of private placement caused by the market's unpredictable fluctuations, the project will maintain the token price through market value management and other means within one working day.

5.3 Token Repurchase and “Combustion” Program

In order to further fully realize the market circulation value of XTT, 20% of the annual profit of the XTT project will be used to repurchase tokens from the market, and 20%~40% of the total repurchase quantity of tokens will be "burned" according to the strategic expectation of the total market value. The precise rules are as follows:

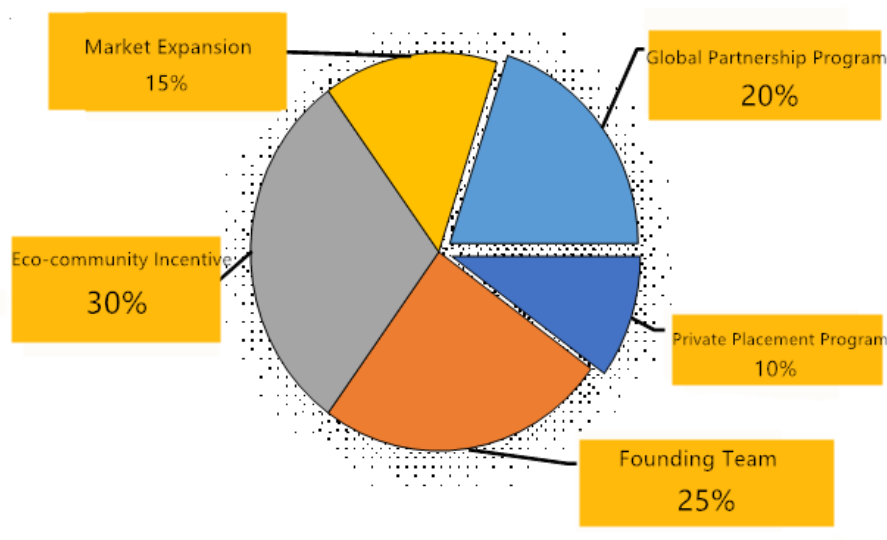

- quantity of distributed tokens / total quantity \times 20% of annual profit;
- Audit the annual profit of the project according to the requirements of relevant regulations;
- The project proponent promises to repurchase tokens constantly. The minimum term for profit distribution is 5 years. That is, from May 1, 2019 to April 30, 2024. 20% of the general after-tax profit will be used to repurchase XTT tokens from the market;
- The repurchase price benchmark is the weighted price for the past 30 days;
- The repurchase will take place on October 15 each year;
- After completion of token repurchase and “combustion”, it will be announced on the official platform.

5.4 Mine Pool Incentive Scheme

The project proponent puts 3% of the annual sales revenue of the online platform into the mining pool, sharing it with the early stage global partners and private users. The sharing model is carried out by daily landing mining mode, and 3% of the proceeds are presented in XTT and other mainstream digital currencies.

5.5 Token Value Appreciation Logic

Firstly, via token repurchase and “combustion” through the platform of the eco-community, the project proponent can reduce the circulation quantity of XTT tokens, therefore the market value of the tokens is added. Secondly, the large number of the eco-community users who hold XTT tokens enter the organic chain of the health industry, participate in course learning, course selling, offline market expansion, online mall product and services purchase, offline physical therapy center building, etc., which can also lead to an increase of XTT token value. Thirdly, with the continuous popularization of special training courses, the health ecology is continuously connected to the physical health centers in various regions. The health center managers need to hold XTT tokens in order to participate in the building of XTT ecological community, and the health center patients will also use XTT for daily settlement in order to obtain a discount for the products and services and the value-added earning of the tokens. The increasing number of regional partners will constantly expand the users group of XTT, therefore the tokens will continue to appreciate. Fourthly, China is enhancing the publicity and promotion of Chinese medicine and acupuncture, it can be anticipated that more people will regard acupuncture as an effective therapy for major health problems in the near future, which will effectively support the long-term value of XTT.

5.6 XTT Token Circulation Mode

In order to ensure the continued prosperity of the entire community and the benefit each and every party of the ecological alliance, the proponent, and the initial holders of the first round subscription by Global Partnership Program and the second round subscription by the Private Placement Program will have a certain lock-up period for the XTT tokens they hold. The funds initially raised are locked up for daily operation of the project team. The tokens raised for market expansion will be used for offline development of the brand, including marketing, health management centers establishment, and partial product R&D. The project proponent will publicize the expenditure through the official channels three working days in advance (the number of token transfers, the recipient and the specific use and expected effect). The tokens raised for eco-community incentive will be used for the building of the online eco-community, including the relevant incentives of the online health mall, the human cost expenditure on the co-administrators, volunteers, etc. in the eco-community. The project proponent will publicize the expenditure through the official channels three working days in advance (the number of token transfers, the recipient and the specific use and expected effect).

5.6.1 Unlocking Plan for the Proponent

XTT tokens held by the proponent will be gradually unlocked in stages, with an entire unlocking period of 4.5 years, and the unlocked quantity in every 3 months is 5.55% of that of the total tokens held by the proponent. The unlocking will be announced three working days in advance through the official announcements. The scheduled unlocking time is shown in the table below. The actual unlocking time is 18 months after landing the trading platform.

Time Schedule for Unlocking of the Proponent's Lockup Positions

Batch No.	Unlock Time	Unlock Ratio	Unlock Quantity	Lockup Ratio	Lockup Quatity
1	2020.10	5.55%	2,775,000	94.45%	47,225,000
2	2021.01	5.55%	2,775,000	88.90%	44,450,000
3	2021.04	5.55%	2,775,000	83.35%	41,675,000

4	2021.07	5.55%	2,775,000	77.80%	38,900,000
5	2021.10	5.55%	2,775,000	72.25%	36,125,000
6	2022.01	5.55%	2,775,000	66.70%	33,350,000
7	2022.04	5.55%	2,775,000	61.15%	30,575,000
8	2022.07	5.55%	2,775,000	55.60%	27,800,000
9	2022.10	5.55%	2,775,000	50.05%	25,025,000
10	2023.01	5.55%	2,775,000	44.50%	22,250,000
11	2023.04	5.55%	2,775,000	38.95%	19,475,000
12	2023.07	5.55%	2,775,000	33.40%	16,700,000
13	2023.10	5.55%	2,775,000	27.85%	13,925,000
14	2024.01	5.55%	2,775,000	22.30%	11,150,000
15	2024.04	5.55%	2,775,000	16.75%	8,375,000
16	2024.07	5.55%	2,775,000	11.20%	5,600,000
17	2024.10	5.55%	2,775,000	5.65%	2,825,000
18	2025.01	5.65%	2,825,000	0	0

5.6.2 Unlocking Plan for the Initial Investors

After the pre-sale channel is closed, the XTT tokens held by the initial investors will enter the lockup position, in which the users of the first round subscription of Global Partnership Program and the users of the second round subscription of Private Placement Program get unlocked gradually 180 days after XTT lands any of the top five trading platforms in the world (the expected date of the landing is July 15, 2019, and the first unlocking date is expected to be Jan.15, 2020. The specific plan will be adjusted according to the actual landing date and publicized). The total unlocking period is 180 days (The unlocking is expected to be completed on July 15, 2020, and will be adjusted according to the actual landing date and publicized). The locked-up tokens will be sent directly by the system to the crypto currency wallet address provided by the holder after the unlocking condition is triggered. Announcement will be made

through the official channels three working days in advance of each unlocking. The project proponent expects that its own unlocking will not begin until the completion of unlocking for the initial users, so as to ensure that TXT will benefit the initial users at maximum.

PART 6.

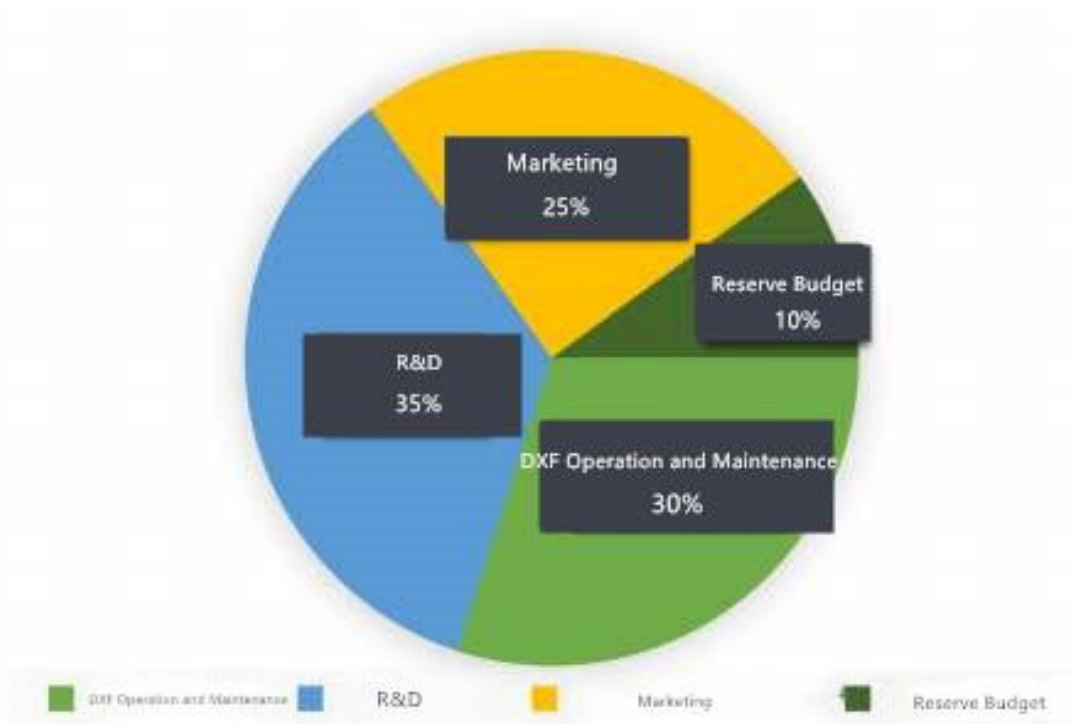

Ecological Governance Framework

6.1 Dr. Xin Foundation (DXF)

Dr.Xin Foundation is dedicated to providing a top level governance framework that is fair, independent, non-profit, and democratic for all community users.

6.1.1 Main Functions of DXF Foundation

DXF foundation will include members from beneficial associations, notaries, charities and other Internet organizations, and the membership is based on the holding of a certain number of XTT. DXF foundation will publicize management platform resources (including marketing and the establishment of the underlying service system) and support related platform technologies. DXF will maintain the XTT building mechanism and enhance risk control system of the entire ecosystem. The high efficiency of XTT ecological system will attract more users to join the platform and maximize the user's service value. And the main task of XTT is to attract and retain the users. DXF foundation's fund usage plan for the fund raised by XTT initial distribution is as follows:

DXF Operation and Maintenance (35%)

Infrastructure construction, human cost and other expenses required in DXF foundation's entire operation process.

Marketing (25%)

The project proponent will adopt both the off-line marketing mode used by the traditional medical industry and the marketing and operation strategy which is adaptable to the mobile Internet mode. The budget will include brand building, targeted advertisement, costs related to industry resources integration and marketing, and the building of Dr. Xin project's own platform 2 ~ 3 years after the official launch of Dr. Xin online applications.

R&D (35%)

Dr. Xin project proponent will set up development teams and health industry R&D centers in various countries and regions, promote the development of modern online diagnosis system, online technique training system and block chain technology, and facilitate the effective integration of acupuncture science and block chain. In order to achieve this goal, the

project proponent will continue to recruit world-class professionals of traditional medicine, AI and financial management and marketing, and will establish an international team for project development and an international management model.

Reserve Budget (10%)

Laws and regulations on the integration of traditional industries and block chain technology are still in the initial stage, which requires the industry and the regulators to jointly explore. There are still unpredictable risks in this field. Dr. Xin project proponent will reserve 10% of the budget for lockup positions.

6.1.2 DXF Development Goals

DXF is committed to building high-quality technology and application tools based on block chain technology, creating a robust, reliable and privacy-guarantee health database and expert system for its users, and implementing a friendly UI interface. DXF enables practitioners, learners, developers, and maintenance personnel who are interested in inheriting and promoting acupuncture science to enter the entire ecosystem and maintain the open source codes to improve the operational efficiency and stability of the platform. DXF will continue to guide and promote the concept of democratic, self-governed, and shared community building, and will establish mutual aid ecology among members and between members and the eco-community in which group wisdom is gathered for further optimization of the eco-system to benefit all the participants.

6.1.3 DXF Governance Goal

The goal of DXF foundation is to study fair and transparent governance practices and standards. It fully considers the common interests of all parties and users, and achieves the dual goals of liberating and managing all parties. The ultimate goal is multi-lateral win cooperation. When the token price is stable, DXF foundation will study risk control model and business model to confront financial crisis, inflation and malicious attacks and enable the overall eco-system's resilience and long term operation.

6.2 The Founding Team

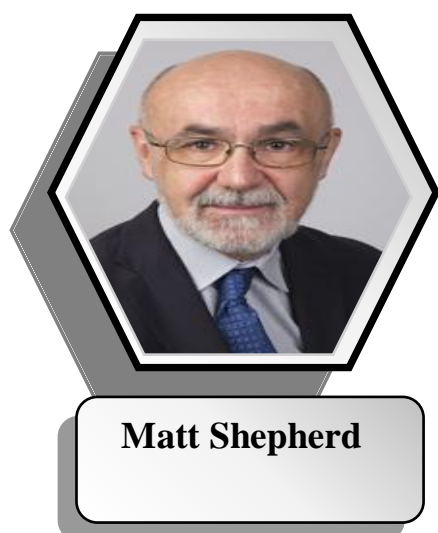

Dr. Xin founding team consists of members most of whom have a high degree from a prestigious university. Many of them have studied, worked or lived in various countries and regions and possess rich medical and commercial resources on a global scale. The team has more than 20 years of experience in the fields of market operation, medical device technology research and development, top-level design for health industry, big data analysis, and financial technology. Team members are mainly located in China, Singapore and Canada.

Xin Ziliang

Founder and Chairman of DXF

XinZiliang is a Canadian Chinese born in a family of Chinese medicine masters. Having more than 40 years of experience in medical practice, XinZiliang is the founder of Dr. Xin brand and Dr. Xin Health Industry Chain Project, an international health management consultant, the director of Dr. Xin Shanghai International Health Research Center, and the executive chairman of DXF Foundation Management Committee.

Matt Shepherd

Chief Scientist

Matt Shepherd, Chief Scientist of Dr. Xin Health Management Research Center, is a Canadian molecular biologist, immunologist, and a researcher at Terrence Donnelly Centre. He has led his team and achieved important results in the field of human soluble polyprotein complex research.

Andrew Gibson

Andrew Gibson

R&D Director

Andrew Gibson, R&D Director of Dr. Xin Health Industry Chain Project, is a British now living in Singapore. He has engaged in global health data industry research and development prediction analysis for a long time, and has carried out in-depth research in medical data visualization analysis, neural network expert system building, big data modeling, distributed databases, etc for many years.

Rebecca Evans

Rebecca Evans

Risk Specialist

Rebecca Evans, Director of Dr. Xin Risk Management Center, is a member of CAP Canada, a certified public accountant, and CEO and co-founder of Evans & Co. She has worked in Canada in the fields of financial services and higher education for many years and has extensive professional experience. She participates in regular professional researches on accounting, finance, and business at prestigious universities such as the University of Toronto and McGill University.

Li Tao

Li Tao

Chief Marketing Officer

Li Tao is Dr. Xin's enterprise solutions specialist, chief marketing officer in Greater China, and the head of the "1000 Shops" Initiative team. Having 10 years of experience in Internet marketing, he specializes in integrated marketing, design and development for enterprise-level products and programs, and health product marketing. He has been in charge of marketing for a number of multinational brands and excels in the field of data operations.

6.3 Instment & Consultant Team

Carlo Baldassarra

Carlo Baldassarra

Carlo Baldassarra is the Chairman and CEO of Greenpark Homes, Canada's largest housing builder, which adheres to the concept of family and community orientation, actively participates in construction of community health infrastructure, and operates a number of community public welfare projects.

Sam Ciccolini

Sam Ciccolini

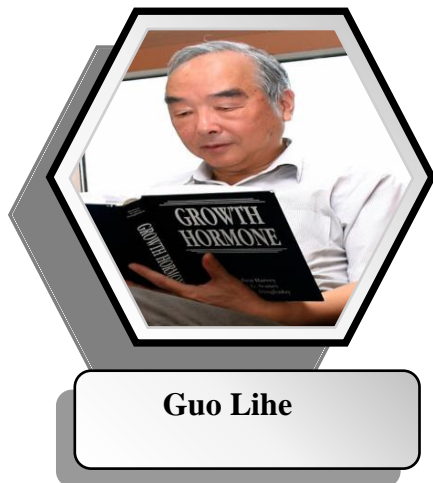

Sam Ciccolini is the co-founder of Masters Insurance, Canada. Masters Insurance is one of the leading companies in the market of construction and secured bond in Ontario. In addition to business operations, Sam Ciccolini is also involved in charities in areas such as child welfare and health care.

David Rice

David Rice

David Rice is the director of Rice Development, Canada's famous community and commercial property developer which specializes in care homes. The company has three mature communities in Ontario, and is building and operating a large scale care home in Brampton.

Guo Lihe

Guo Lihe

Guo Lihe is a researcher and Ph.D. mentor at Biochemistry and Cell Biology Study, Shanghai Institutes of Biological Sciences, Chinese Academy of Sciences. He had been appointed to the positions of vice chairman of Chinese Society of Cell Biology, executive director of Chinese Society of Biochemistry and Molecular Biology, executive director of China Bioengineering Society, and editorial board member of Cell Research.

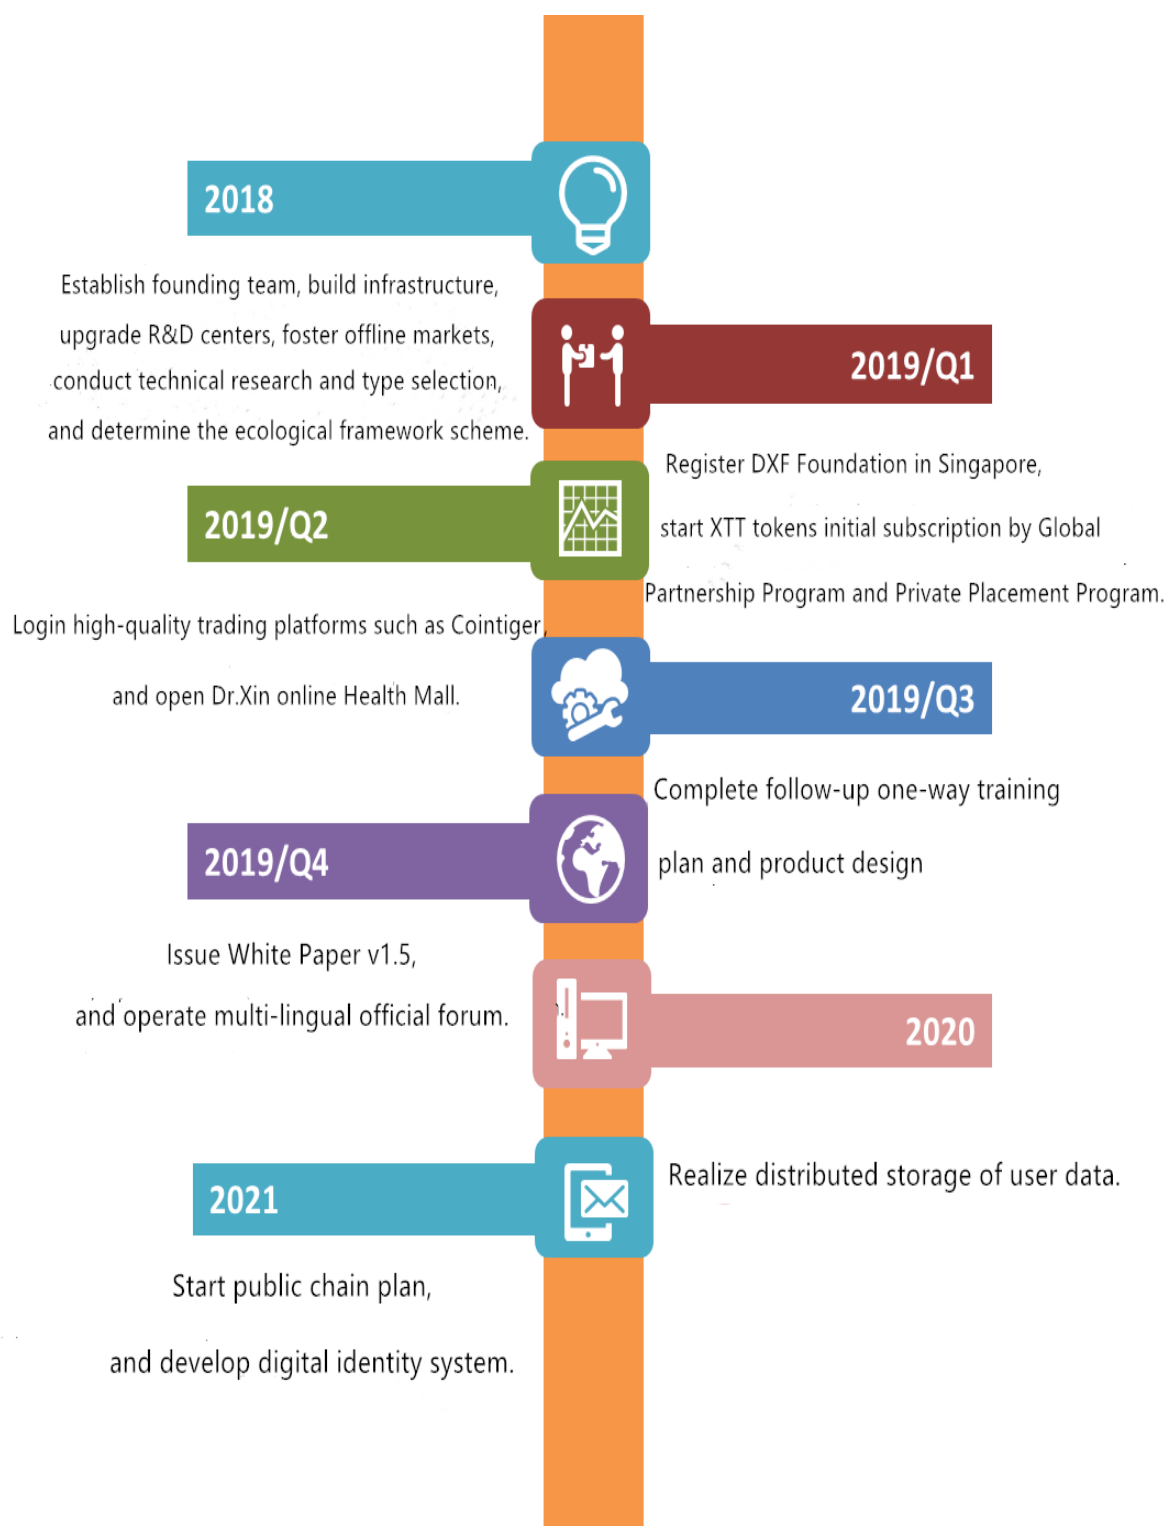

Chen Yulin

Chen Yulin

Chen Yulin is a professor, chief physician and a Doctoral mentor at China Second Military Medical University, and a pioneer in the study of burn shock microcirculation. He has achieved substantial results in delayed resuscitation of shock and resuscitation of hypertonic salt solution, and has consequently won renowned state and military awards respectively for his scientific & technological

PART 7.

Road map

PART 8.

Warning of Risks

All supporters and participants of Dr. Xin Health Industry Chain Project should carefully read the White Paper and relevant information on the official website, profoundly understand the future vision and strategic planning of the project, thoroughly study and rationally analyze and judge opportunities and risks, and participate prudently. There are potential risks in the project, which are suggested as follows:

8.1 Policy Risk

Block chain is a new technology, currently there is no unified regulatory policies on block chain-related industries in the world, so the long-term development faces high uncertainty. Although all commercially reasonable steps have been taken by the project proponent so far to ensure the project accuracy and that the project complies with current regulations, under the current situation, any token economy project may be affected by regulatory actions, including the potential restrictions on the ownership, right of use and holding of tokens. Regulatory requirements or other circumstances may lead to entire or partial modification of the token mechanism of the project. In order to comply with regulatory requirements or commercial obligations, the project proponent may modify the token mechanism when necessary.

8.2 Business Cycle Risk

The block chain industry is cyclical in terms of growth, and digital currency is still in its early phase, hence XTT may face worldwide risks of economic cycle, illiquidity, hacker attacks, and currency fluctuations in its development process. The project proponent cannot guarantee that XTT will add value absolutely, and will not provide any promise, guarantee, refunding or compensation for the free market trading behaviors.

8.3 The Risk of Project Schedule

The block chain technology and related application are still in the early development phrase, and

there is no precedent in many areas. Because some products and items involved in the White Paper are still in the strategic planning stage, and the future research and development will confront with many unknown factors, the project proponent cannot completely guarantee that the default goals of the products and businesses described in the White Paper reached on time. The White Paper is a long-term strategic plan. When the industry is mature and the external environment changes, new circumstances and new factors may occur. The planned products and businesses may be further adjusted according to the actual market demand and feedback. The project proponent reserves the right to adjust and renew the White Paper at any time that is necessary.

8.4 Other Risks

Block chain is a brand new field. While bringing about the possibility of complete reforms in the business field of commerce and finance, it may face many other new types of risks that are unknown at present.
